ABSTRACT:

PROBLEM TO BE SOLVED: To provide a medium to be recorded for recording by using a pigment ink having excellent weather resistance particularly in an ink jet type for simply, easily obtaining a color image.

SOLUTION: In the ink jet recording medium for recording by using ink containing a pigment as a color developing component by providing an ink receiving layer containing at least one type of pigment selected from an amorphous silica, alumina and aluminosilicate and a binder on a support, the receiving layer further contains a cationic resin having a cationic intensity measured by a colloidal titration process of 1.5 to 6 m equivalent/g.
